

Hemming machine on trouser bottoms and sleeves TS-63972-D4

TS-63972-D4 video

Advantages

1. High efficiency: 10-12 pcs/ minute.
2. Interchange between lockstitch and chainstitch: Realizes two different stitches by changing the hook and looper to meet the needs of different processes.
3. Automation: Presser foot lifter, trimmer, sweep thread and curling folder.
4. Reinforce function: Dense stitch when ending to prevent off-line.
5. Synchronous feeding: upper-lower puller and needle feeding prevent the dense stitch on joint.
6. Cylinder bed: More suitable for sewing hemming on trousers.
7. The machine is suitable for hemming of jeans, casual pants and such other trousers and sleeves.

Specifications:

Max speed	4000rpm
Width of hemming	2 cm
Perimeter of cylinder bed	23cm
Feeding	Upper and lower puller, needle feeding
Stitch	lockstitch or chainstitch
